SyteLine 7 Configuration

SyteLine Configuration from MAPICS is advanced order and product configuration software designed for and integrated with SyteLine 7, the leading extended ERP system for manufacturers on the Microsoft platform.
The Challenge

Responding to customers and creating unique value are essential to manufacturing success. As customers require products with specialized features, more functionality, and different packaging, manufacturers must offer product innovation, distinction, and selection without risking high quality, quick response or value. However, increasingly complex and customized orders can lead to a variety of problems. Industry studies indicate that 50 to 80 percent of all quotes and orders can be inaccurate in a complex manufacturing environment. Those inaccuracies can cost a company as much as two percent of revenue—a significant loss.

Configuration software that improves the sales and marketing process can help eliminate costly errors in quotes and orders. For most companies, the payback on an investment in configuration software is realized within months.

The MAPICS Solution

Developed for manufacturers of complex and widely variable or customizable products, SyteLine Configuration is the only leading configuration application tightly integrated with SyteLine 7 ERP. SyteLine Configuration provides you with an interactive bridge from your customers to your production operations.

Using SyteLine Configuration, customers, salespeople, and order entry clerks can select the appropriate choices from a myriad of product options. Customer service representatives can configure, estimate, price, and order complex products and services with confidence, knowing the product will meet customer specifications, and that the product can be built and delivered on time.

Benefits

- Streamlines the ordering process to save time

- Increases customer satisfaction and retention

- Drives sales revenue and profit

- Cuts lead times on orders

- Configures and prices products right the first time

- Improves production accuracy and saves costs on rework and scrap

Exceed Customer Expectations   Improve Visibility   Manage Global Enterprise

Speed Time-to-Market   Streamline Outsourcing   Cut Operations Costs   Reduce Lead Time

WORLD CLASS

Features

Single Line, or Entire Order Configuration
Ensure that products will work together—the first time—with the ability to configure either a single line item or the entire order.

Interactive Configuration
Free your engineering staff from the need to check and approve every order.

Custom Job Order Creation
Automatically generate a 100-percent-accurate bill of materials and job routing for a reduction in order-entry errors.

Order-entry Integration
Reduce the costly back-and-forth communications in the quoting and estimating phase.

Graphical User Interface Options
Simplify usage, model development and maintenance processes with powerful configuration tools.

Drag and Drop Capabilities
Use intuitive, object-oriented capabilities to reduce training and the time needed to learn new applications.

Object-oriented Structure
Preserve hierarchical relationships among products, product groups, component parts, and attributes so that rules are automatically inherited down a chain of products.
